

# Asset Tracking & Automation

## Real-Time, Room-Level Asset Intelligence

### What it is?

Cognosos' asset tracking solution combines low-energy Bluetooth with patented long-range wireless networking to deliver hospital wide, room-level visibility. The cloud-based platform offers precise asset intelligence with ultra-lightweight infrastructure- without reliance on hospital Wi-Fi or costly cable pulls.

### What it does?

Powered by LocationAI and machine learning, Cognosos automatically maps facilities to locate medical equipment instantly across campuses based on radio signatures of rooms. A central portal allows teams to track critical workflows, manage maintenance, and trigger alerts for unexpected asset movement.

### Why it's different?

Unlike other systems, Cognosos requires no massive IT lift or disruptive construction. Our solution deploys in weeks, which means your hospital can start seeing ROI quicker. Powered by LocationAI, it delivers room-level accuracy at a fraction of the cost or disruption.

### What's the value?

Cognosos transforms location data into actionable intelligence that drives impactful business decisions. By eliminating search time and optimizing equipment utilization, the platform delivers a proven hard-dollar ROI.

- Reduces search times, returning crucial staff to patient care
- Uses evidence-based procurement practices to stop costly over-purchasing
- Small tag size gives the ability to track a high variety of equipment
