

# Intelligent Hand Hygiene Compliance

Your solution for a safer hospital

## What it is?

Cognosos' hand hygiene monitoring system provides intuitive, customizable, and extensive tracking of healthcare worker sanitization. By capturing precise data, this solution helps facilities reduce Healthcare-Associated Infections (HAIs) and meet strict compliance standards.

## What it does?

This solution uses RTLS-enabled badges to pinpoint staff location and proximity to hand sanitizing stations, automatically verifying when dispensers are activated. Sensors transmit real-time data to dynamic dashboards, offering a clear view of compliance at facility, department, and individual levels to simplify audit processes.

## Why it's different?

Our solution is fully tailored to your hospital's needs, allowing you to implement facility specific activation alerts, individual room safety rules, and timeframe adherence based on room type. It unlocks actionable analytics and comprehensive compliance data across different roles and shifts, identifying key trends to streamline workflows.

## What's the value?

This system helps to reduce the \$28.4 to \$33.8 billion annual cost and severe risk of HAIs. Consistent hand hygiene monitoring creates a safer patient environment and supports improved clinical outcomes.

- Promotes strict regulatory compliance for facility accreditation
- Reduces the risk and the immense financial impact of HAIs
- Enhances patient safety and experience
