

Mobile Staff Safety

Protecting your most valuable assets: Your Staff

What it is?

The Cognosos Staff Safety solution is a real-time location system designed to provide healthcare workers with peace of mind. It features a thin, lightweight badge that allows staff to discreetly call for help during an emergency. Powered by our proprietary LocationAI engine, it delivers industry-leading accuracy to pinpoint a staff member's exact location during a violent event.

What it does?

When a healthcare worker presses the hidden badge button, it sends a prioritized duress alert over a dedicated communications channel, that is independent of hospital Wi-Fi. Our API seamlessly integrates with existing security systems to trigger a multi-tiered response, dispatching alerts via email, SMS, buzzers, and security personnel.

Why it's different?

Unlike traditional systems, Cognosos relies on an independent network so alerts are never slowed down by Wi-Fi traffic or IT outages. Our LocationAI engine delivers room-level accuracy without requiring expensive infrastructure. Our staff safety solution also alerts indoors and outdoors, so employees are covered inside the hospital and out to the parking garage.

What's the value?

This helps manage facility risks by drastically shortening response times to potentially violent incidents. It empowers early intervention, creating true peace of mind and much greater safety for essential staff.

- Meets Joint Commission requirements to mitigate or resolve safety and security risks
- Cost savings in the form of fewer employee injuries and incident-related absences
- Safeguard staff indoors & outdoors
