See every vehicle, every handoff, all the way to the lot.

A vehicle changes hands and transit modes again and again between the plant and the dealer lot. Every handoff is a chance to lose track of where it is, and that uncertainty costs you time, trust, and accurate delivery dates.

There's a better way to watch the whole journey.

Global Sweep tracks vehicles continuously from the moment they're off the line, through OEM transit, to the dealer lot, using lightweight, disposable BLE tags with no gateways or fixed infrastructure to install. It plugs directly into your Cognosos platform, so every vehicle shows up on one connected timeline from plant to lot.

WHAT YOU GET

- **Continuous in-transit visibility**
  Know where a vehicle is between every handoff, not just at milestone checkpoints.
- **Zero-infrastructure tags**
  Disposable BLE tags with no gateways, no fixed infrastructure, and no hardware to maintain.
- **One connected timeline**
  See the full journey, over-the-road and lot, in a single view, from Tier 1 shipment to dealer arrival.
- **No new hardware to deploy**
  Layers onto your existing Cognosos platform. Nothing new for your team to install or manage.
- **Built to scale**
  Works across your network, from a single pilot lane to your full fleet volume.
- **Smart alerts**
  Get notified the moment a vehicle enters a zone or sits still longer than it should.
