

Staff-Patient Encounter Monitoring

Zero infrastructure patient encounter monitoring

What it is?

Cognosos offers a zero infrastructure patient encounter monitoring solution. The solution monitors the proximity of an AI-Ready staff badge with a disposable patient wristband to determine when they are interacting.

What it does?

The Patient Encounter solution reports the time and duration of every staff:patient encounter wherever they occur.

Why it's different?

The Patient Encounter solution requires no RTLS infrastructure or setup, relying only on tag proximity to determine that an encounter has taken place.

What's the value?

Start tracking patient encounters anywhere onsite with zero infrastructure and instant value, straight-out-of-the-box.
